

Visual Simulation - Portsmouth Olympic Harbour, Kingston

Existing Conditions

Proposed Conditions

Enhanced Conditions

Notes:

1. Simulations include sun angles which create silhouettes and shading on the proposed turbines.
2. As seen from this location, turbines appear in clusters. The clustering effect is a result of the turbine layout where turbines are located in close proximity to each other.
3. In this simulation, the colour in the sky captured in the photograph was too light to allow the turbines to be seen clearly. Therefore, turbines in the simulations were artificially darkened to appear more visible than they would have under the actual light and atmospheric conditions.
